

orrigen

May 2019

What an exciting month for Orrigen! We had our first meeting with the UL team and our mechanical engineers and we have our next steps laid out. We are proceeding with the certifications for both smoke detection and carbon monoxide detection. We are considering completing the testing and certifications for Power over Ethernet, Visual Indication, Camera, Infrared Sensing, Camera / Microphone, and Wi-Fi Mesh Network as well. We are scheduled for our first in-person meeting with UL on June 20th to determine best practices for completing testing.

On the business side, our website is live! Please take a look at orrigen.com and let us know if you have any feedback. We have received another significant round of funding from our investors and plan to use this funding to get us to the mass manufacturing phase – assuming we do not sell before then. We have an incredible investor team and would love for you to be a part of that. If you have any interest, please reach out to Macie at macie@orrigen.com. Lastly, our patent attorney and electrical engineer have identified 3 additional possible patents to file. They are currently completing the research associated with filing those patents.

Electrically, we are in the final stages of completing the LED process control board. We have working PCBs on hand, and our engineer is writing and testing code for that PCB. He is critical in our conversations with UL, and along with our mechanical engineers, has done an incredible job managing the certification process with UL.

We are thankful you're with us on this journey! Please don't hesitate to reach out to a team member if you have any questions or concerns.
